Credit Name: CS20 Chapter 5 Mastery
Assignment Name: Investment & DigitsSum

Error Log Entry

Investment

What error message did you encounter (if any)? The first time I tried it the loop ran forever and crashed Eclipse.

What unexpected behavior did your program exhibit? It would run countinously and not stop.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.) I forgot to add years = years + 1; inside the loop so basically it never kept track of the passing time and I used a for loop wrong.

How did you fix the issue? Switched it to a while loop that checks money < 5000 and made sure both the money and the years go up inside the brackets

DigitsSum

What error message did you encounter (if any)? Eclipse froze up when I ran it the first time

What unexpected behavior did your program exhibit? When i first started it up the test froze and wasnt running at all,

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.) Infinite loop because I forgot to put num = num / 10; inside the brackets.

How did you fix the issue? Added the division line at the bottom of the loop so the number actually shrinks to 0 and stops.
