Investment the $2500 and 7.5% interest **DigitsSum** A positive whole number typed in (like 892).	**Investment** Starts the money at 2500 and years at 0. Loops over and over as long as the money is under 5000.0. Inside the loop, it does the math to add 7.5% interest to the total balance. Adds 1 to the year count every time the loop repeats **DigitsSum** Take the number using the Scanner. Starts a total sum variable at 0. Loops until the number runs out of digits and hits 0. Uses % 10 to grab just the very last digit. Adds that digit to the running total sum. Uses / 10 to chop that last digit off the number so it can check the next one.	**Investment** Prints out how many years it took to double. Prints out the final dollar amount **DigitsSum** Prints out the final added total (like The sum of the digits is: 19)
